Business Requirements Document (BRD)

Application Name: Mavericks Inventory

Inventory Management Application

---

1. Purpose of the Document

The purpose of this Business Requirements Document (BRD) is to define the **functional, non-functional, reporting, and governance requirements** for the **Mavericks Inventory Management Application**.

This application will enable **controlled, auditable, and approval-driven stock management** through:

- Excel-based bulk uploads
- Transactional stock distribution entries
- Maker–checker approval workflows
- Automated stock reconciliation and reporting

The BRD serves as a **baseline agreement** between business stakeholders and the product, engineering, and quality assurance teams.

---

2. Business Objectives

The key business objectives of the Mavericks Inventory system are to:

- Centralize stock data across departments
- Reduce manual errors and discrepancies in stock tracking
- Enable Excel-based bulk upload and management of inventory
- Enforce maker–checker controls for stock transactions
- Maintain accurate, near real-time visibility of stock availability
- Ensure full auditability and traceability of all stock movements
- Improve operational efficiency and compliance

---

3. Scope

3.1 In-Scope

- Stock master creation and upload via Excel
- Single and bulk stock distribution entry
- Configurable approval workflows (maker–checker)
- Automated stock quantity updates post approval
- Create, Read, Update, Delete (CRUD) operations on stock masters
- Logical deletes for master data
- Audit logs and approval history
- Role-based access control (RBAC)
- Reporting and dashboards

3.2 Out-of-Scope

- Financial accounting or invoicing
- Vendor procurement or purchase workflows
- Warehouse automation or IoT integrations
- GST or statutory compliance reporting

---

4. Stakeholders

Role	Responsibility
Executive	Upload stock data, initiate distribution entries
Manager	Review and approve stock transactions
Management Authority	Secondary / final approval authority (configurable)
System Administrator	User, role, master data, and hierarchy management

---

5. User Roles & Access Control

5.1 Executive

- Upload stock master data via Excel
- Create, update, and delete stock items (draft state only)

- Record stock distribution transactions
- Submit transactions for approval
- View approval status and remarks

5.2 Manager / Management Authority

- Review submitted stock transactions
- Approve or reject requests with remarks
- View audit trail and stock movement history
- Access approval-based reports

5.3 Admin

- Create and manage users and roles
- Configure approval hierarchy and workflow rules
- Manage master configurations
- Access full audit logs

---

6. Functional Requirements

6.1 Stock Master Upload (Excel)

- Executives can upload stock master data using a **predefined Excel template**
- System validations include:
    - Mandatory column checks
    - Data type validations
    - Duplicate stock code detection
- Valid records are saved in **Draft** state
- Invalid records are rejected with a downloadable **error report**

Key Attributes

- Stock Code (unique)

- Stock Name
- Category
- Unit of Measure
- Opening Quantity
- Location (optional)

6.2 Stock Master Management

The system shall allow:

- Single stock item creation via form
- Update of existing stock item details
- Soft delete (logical delete) of stock items
- View of current available stock quantity
- Prevention of deletion for stocks with existing transactional history

---

6.3 Stock Distribution Entry

Executives can record stock distribution through:

- Single distribution entry form
- Bulk Excel upload

Each distribution entry captures:

- Stock Item Code/Name
- Quantity Distributed
- Distribution Date
- Recipient / Location
- Purpose / Remarks

Transaction Status Flow

- Draft
- Submitted
- Approved

- Rejected

6.4 Approval Workflow (Maker–Checker)

- Minimum one level of approval is mandatory
- Optional second-level approval (configurable)
- Approvers can:
  - Approve transactions
  - Reject transactions with mandatory remarks
- Rejected transactions return to Executive for correction and resubmission
- System enforces strict maker–checker role separation

6.5 Automatic Stock Adjustment

- Stock quantity updates only **after final approval**
- On approval:
  - Distributed quantity is deducted from available stock
- On rejection:
  - No stock impact occurs
- System prevents distribution exceeding available stock (configurable rule)

6.6 Edit / Update / Delete Rules

Action	Allowed Status
Edit Distribution	Draft, Rejected
Delete Distribution	Draft only
Edit Stock Master	Draft / Admin override
Stock Quantity Update	Only via approved transaction

---

7. Audit & Traceability

The system must maintain complete traceability for compliance and audit:

- Created by / Created date
- Submitted by / Submitted date
- Approved or rejected by
- Approval date and remarks
- Complete approval history per transaction
- Stock movement ledger per stock item

No hard deletes permitted for transactional data.

---

8. Reports & Dashboards

The application shall provide:

Standard Reports

- Current Stock Availability Report
- Distributed Stock Report
- Pending Approval Report
- Approval History Report
- Stock Movement Ledger

Export Options

- Excel
- PDF

---

9. Non-Functional Requirements

9.1 Security

- Role-Based Access Control (RBAC)
- Segregation of duties (maker–checker)
- Secure Excel file uploads
- Controlled access to approval and audit data

9.2 Performance

- Excel uploads supporting up to **50,000 rows**
- Approval actions processed within **3 seconds**
- Report generation within acceptable SLA

9.3 Availability

- System uptime of **99.5%**

9.4 Audit & Compliance

- Complete data change logs
- Immutable approval records
- No hard deletions for transactional data

---

10. Assumptions

- Excel templates will be finalized and standardized
- Approval hierarchy is configurable per business needs
- All users have stable internet access

---

11. Risks & Mitigation

Risk	Mitigation
Incorrect Excel format	Template validation & error reporting
Unauthorized stock changes	Mandatory approval workflow
Data inconsistency	Automated stock recalculation post approval
Approval delays	Configurable escalation mechanism

---

12. Acceptance Criteria

- Stock master upload works for both single and bulk modes

- Approval flow enforces maker–checker separation
- Stock quantity updates only after approval
- Audit logs available for every transaction
- Reports reflect accurate stock balances

✅ Outcome

Mavericks Inventory will deliver a **secure, scalable, and auditable inventory management solution**, ensuring operational accuracy, accountability, and transparency across all stock movements.
